

Build the growth engine inside the installed base

Where HTG stands, where competitors are moving, and the path to scalable customer expansion

CURRENT
POSITION

COMPETITIVE
LANDSCAPE

GROWTH
DIRECTION

The answer: exploit the base before widening the stack

01

WHERE HTG IS

Scaled, modular and independent - but commercially fragmented.

02

WHERE RIVALS ARE

Converging reservations with demand, payments, POS and CRM.

03

THE CORE RISK

Integration complexity slows cross-sell while global platforms bundle faster.

04

THE GROWTH MOVE

Create one expansion engine: data, signals, ownership, playbooks and quota.

CEO implication

Appoint an owner of Expansion MRR and NRR - then prove three plays in 90 days.

HTG starts from a rare position of scale and independence

36k+

restaurants across 20+ countries

6

verified CoverManager product families

130+

CoverManager integrations

2

complementary regional brands

THE RIGHT TO WIN

Regional depth

Iberia, Italy and LATAM + France, Benelux and DACH

Modular economics

Reservations can land; payments, CRM and experiences can expand

Direct relationship

Restaurant-owned brand and guest relationship as a strategic position

Public company figures; internal ARR, customer split and adoption remain to be validated.

Two regional leaders now have one strategic opportunity

Do not wait for perfect product unification. Build a federated expansion model now.

The growth stack already exists - adoption is the constraint

Priority: sell and activate existing modules before funding new categories.

Capital is converging on the full guest revenue chain

* Proposed transaction, pending customary conditions.

HTG sits between point solutions and global ecosystems

HTG can move up and right through deeper CRM, payments economics and cross-brand execution - without becoming a full POS.

Four competitive models are closing in from different angles

DEMAND NETWORKS

OpenTable
TheFork

Discovery, consumer traffic and cover economics

PRESSURE ON HTG

GUEST CRM

SevenRooms

Data depth, automation and premium operators

PRESSURE ON HTG

POS + FINTECH

Toast
Square
Cegid Revo

Transaction data, payments, payroll and capital

PRESSURE ON HTG

EUROPEAN INDEPENDENTS

HTG
Last.app
Ágora

Local depth, control and integration flexibility

HTG ADVANTAGE

HTG wins where local depth meets a modular guest journey

The strategic edge is not “more features” - it is a connected, independent revenue layer above the restaurant stack.

The biggest risks are executional - not market demand

1. Fragmented data

Duplicate accounts, inconsistent product usage and no single NRR truth.

2. Ownership conflict

CS, Sales, brand and country teams compete for attribution.

3. Product friction

Cross-brand offers may require manual work, contracts or integrations.

4. Margin opacity

Payments GMV can mask net revenue, fees, refunds and risk.

5. Over-selling

Expansion bookings rise while adoption and GRR deteriorate.

6. Global bundling

DoorDash, Amex, Booking and POS platforms can subsidise modules.

Mitigation: one account hierarchy, one catalogue, one attribution policy, one expansion P&L.

Growth should follow three moves - in this order

01

MONETISE THE INSTALLED BASE

Payments, CRM, Experiences, Assistant and Waitlist

0-6 months

02

UNIFY THE COMMERCIAL ENGINE

Account data, signals, ownership, playbooks and quota

0-12 months

03

SELECTIVELY WIDEN THE STACK

Partner or build in compliance, revenue management and fintech

6-24 months

Rule: existing-module adoption before new-product ambition.

Four plays concentrate the near-term expansion value

SEGMENT	PRIMARY PLAY	TRIGGER	VALUE METRIC
Fine dining	Payments / prepayment	High no-show + high ticket	Protected revenue
High-volume restaurants	Assistant + Waitlist	Missed calls + walk-ins	Captured covers
Groups + hotels	CRM + analytics	5+ outlets + fragmented data	ARPU + retention
Nightlife + events	Experiences + Payments	Tickets + VIP + guest lists	Net revenue + repeat

Start with accounts that are healthy, eligible and observable - not simply the largest accounts.

Turn product signals into a repeatable revenue system

LEARNING LOOP: conversion → activation → retention → re-score

North star: activated expansion gross profit by cohort

The model must prove gross profit - not activity

Eligible
accounts

×

Conversion

×

Incremental
monthly ARPU

×

12

=

EXPANSION
ARR

ACTIVATION	MARGIN	RETENTION	PAYBACK
Usage within 30-60 days	Net revenue - delivery cost	GRR does not deteriorate	Within Finance hurdle

Benchmarks inform ambition; internal cohorts determine the target.

Create one accountable owner without breaking CS or Sales

Prove the engine in 90 days

Day 90 output: baseline + pilot economics + scale / fix / stop decision.

The 12-month path: truth → proof → scale → optimize

Exit criterion: NRR and attach rate improve by cohort without sacrificing GRR or margin.

Approve the growth engine - not another sales campaign

01

APPOINT

A Director accountable for Expansion MRR and NRR.

02

MANDATE

Access to billing, CRM, product usage and contract data.

03

AUTHORIZE

Three 90-day pilots with GRR and margin guardrails.

The installed base becomes HTG’s second growth engine when data, ownership and economics operate as one system.
